

Energy Savings

The international **ENERGY STAR** symbol is a simple way for consumers to identify products that are among the most energy-efficient on the market.

Choosing an ENERGY STAR labeled product over a conventional model could save you hundreds of dollars in energy costs.

How to know?

- Your home feels drafty in cold weather or uncomfortably hot from heat penetrating in warmer weather
- Your heating and cooling bills are high—and keep getting higher!
- Your home's existing windows are faded or cracked, making your home look old, dated or in poor condition
- Your windows are difficult or impossible to open or close.

By installing fully weather-proof and noise-reducing windows and doors, you'll save energy and improve your family's environment, both inside and out, simply by keeping the heat in and the cold out.

Low E2 Glass

This is the best performing glass on the market today. Stay cool in the summer as Low E2 glass reflects the sun's heat and damaging rays. In winter your home will be warm because the Low E2 glass reflects the heat back into the room. This is the right glass for your windows with a R4 centre of glass rating.

- Reflects Damaging UV Rays
- Warm in Winter, Cool in Summer
- Reduces Furniture and Carpet Fading
- Affordable

Doors

Not all doors are created equal. When choosing doors for your home, be sure to pay close attention to the product performance, level of craftsmanship and security features

Features

- Vinyl is intimately bonded to the wood core, eliminating possibility of moisture collection between the vinyl and wood
- Crisp, clean appearance at the jamb points, completely wraps all visible surfaces of the installed frame
- Never requires painting
- Prevents movement of the tough vinyl surface relative to the wood profile underneath
- Performs well in weather conditions from driving rain storms to sleet and snow
